

Jet-Pong – Home Version

\$9,995.00

Valley-Dynamo has done it again. Introducing Jet-Pong, the electronic version of the novelty game Beer-Pong. This innovative game allows for 1 to 2 player modes and features our patented ball return Aerr Technology. This game also features, HMI Scoring Screens, Video Display Advertising Screen, Custom LED Lighting, Matrix LED Playfield, 200 Watt Speaker system, Custom Sounds for Scoring and Attract Modes, Built-in Wireless, and meets the local, city and state liquor license guidelines allowing it to be used in bars, restaurants, resorts, cruise ships, college campuses, FEC's and barcades. Jet-Pong does not require the use of liquids, of any kind, allowing this game to function without the mess.

Jet-Pong is hands-on, go-for-it fun for multiple players or just one.

The rules are few, the object is simple, anyone can play, everyone can enjoy!!

A game is started by pressing the green flashing button. The first ball is then “served up” to player one by a pressurized column of air that magically hovers or levitates the ball about a foot above the table where it can be easily grabbed by player one from mid-air. Players alternate turns by pressing their player buttons, grabbing the levitating ball and tossing it into one of the red Solo cups at the other end of the table. A display near the players shows the score, number of balls left, and cups yet to be made. LEDs under cups shut off when a cup is made. Music and cheering play when a cup is made. One and two player modes. Each player gets 10 balls. Game

score, # of cups made and number of balls left to throw is continuously updated on the screens. If a cup is missed (or made) the ball rolls down our internal ball return and is recycled through the table by our patented Aerr Technology. Side guards near the cups help contain the balls and a shot clock helps to prompt each player's turn.

EXCITING AND USEFUL FEATURES:

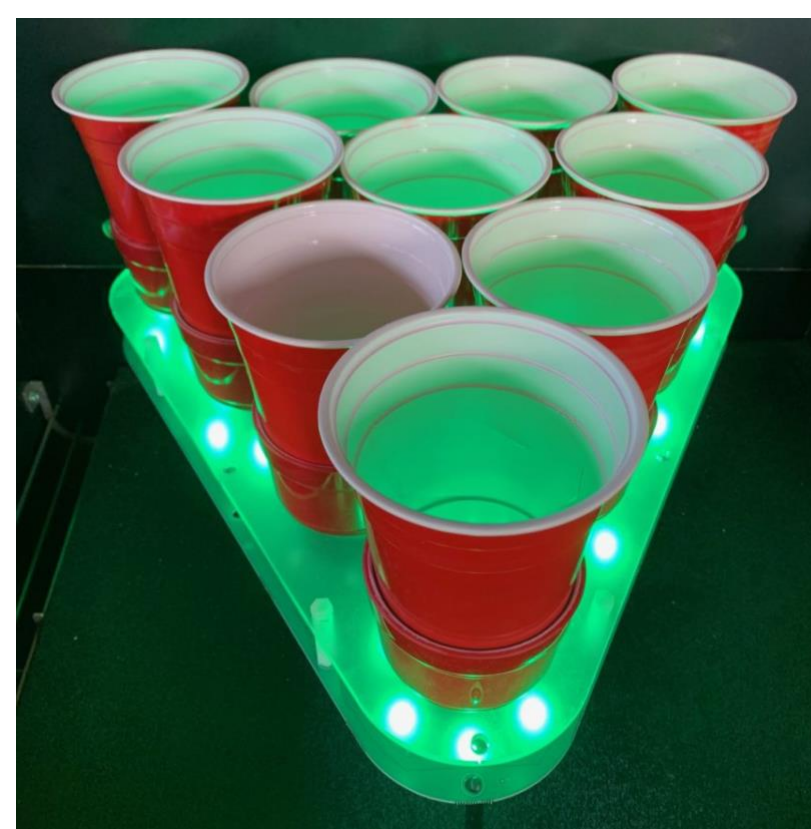

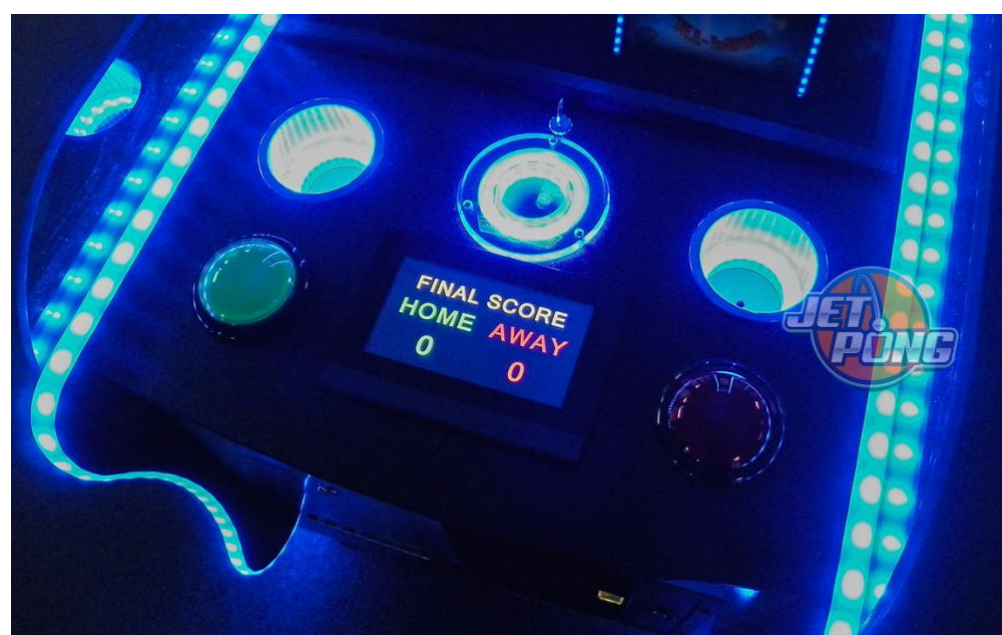

- Playing area is Tournament REGULATION SIZE.
- Horizontal infinity panel makes Jet-Pong the most futuristic piece of your game-room
- Floating ball grabs the attention of players and guests
- Only Three moving parts – one of which is an industrial-grade blower motor.
